Subject: **RECOMMENDATIONS FOR PAVEMENT STRUCTURAL SECTIONS** 1
Grand Terrace Elementary School – Southeastern Parking Lot
12066 Vivienda Avenue
Grand Terrace, California 92313

Dear Kenny,

In accordance with your request, pavement structural sections have been prepared for the subject project. Previous laboratory testing of samples obtained by our representative from the site indicate that the subgrade soils have a Resistance (R) Value of 21 (MTGL, 2023). The results of our laboratory tests are attached to this report.

Recommended pavement structural sections are based on the procedures outlined in the design procedures for pavements of the Highway Design Manual, California Transportation Department. This procedure uses the principle that the pavement structural section must be of adequate thickness to distribute the load from the design traffic (TI) to the subgrade soils in such a manner that the stresses from the applied loads do not exceed the strength of the soil (R value). The recommended structural sections are as follows:

ASPHALT PAVEMENT STRUCTURAL SECTIONS

Pavement Area	Traffic Index	Asphalt (inches)	Aggregate Base (inches)
Parking Areas	5.0	4	5
Driveways	6.0	4	9
Truck/Fire Access Lanes	7.0	4	12

PORTLAND CEMENT CONCRETE (PCC) PAVEMENT STRUCTURAL SECTION

Pavement Area	Traffic Index	PCC Pavement (inches)	Aggregate Base (inches)
Concrete Pavement (min f'c = 4,500 psi)	5.0 – 8.0	7½	4

Areas beneath proposed pavements will require a minimum depth of 12 inches of removal and recompaction to 95% relative compaction in accordance with ASTM D1557. The exposed excavation bottom should be scarified to a minimum depth of 6 inches, moisture conditioned, and recompacted to 90% relative compaction. Any soft or yielding areas should be removed and replaced with compacted fill or aggregate base.

The aggregate base course should conform to the latest "Greenbook" Standard Specifications for Public Works Construction for crushed aggregate base or crushed miscellaneous base, or to the latest Caltrans Standard Specifications for class II aggregate base. All aggregate base should be compacted to at least 95% relative compaction. Aggregate base should have an R-value of not less than 78. All materials and methods of construction should conform to good engineering practices.

The findings, conclusions, and recommendations contained in this report are based on the site conditions as they existed at the time of our investigation, and further assume that the subsurface conditions encountered during our investigation are representative of conditions throughout the site. Should subsurface conditions be encountered during construction that are different from those described in this report, this office should be notified immediately so that our recommendations may be re-evaluated.

We appreciate this opportunity to be of continued service to you on this project. Should you have any questions regarding this report, please do not hesitate to contact us at your convenience.

Respectfully Submitted,

RE:
Limited Asbestos and Lead Paint Survey
Grand Terrace Elementary School – Buildings B, C, D - Exteriors
12066 Vivienda Avenue
Grand Terrace, California 92313
B2 Environmental Project #40007.0043

Dear Mr. Porter:

B2E was retained by the Colton Joint Unified School District to conduct a limited asbestos and lead materials survey of suspect asbestos-containing materials (ACM) and suspect lead paint, at the Grand Terrace Elementary School located at 12066 Vivienda Avenue, Grand Terrace, California. The asbestos and lead materials survey was limited to the exteriors of Buildings B, C, D, that will be impacted by the Exterior Modernization project.

Survey Summary – Asbestos

On May 16, 2024, B2E inspector Richard Garcia, a California Certified Site Surveillance Technician (CSST# 96-1908) under the direction of Raul Garcia, California Certified Asbestos Consultant (CAC# 05-3783) collected twenty-nine (29) asbestos bulk samples (including layers) from the exterior of buildings B, C, D.

Prior to sampling, B2E's inspector walked the exterior building areas, to verify which areas/materials would need to be investigated and sampled. B2E's inspector then identified homogeneous areas to facilitate a sampling strategy. Homogeneous area means an area of surfacing material, thermal system insulation material, or miscellaneous material that is uniform in color and texture. The actual number of samples collected from each homogeneous sampling area varies, dependent upon material type and the professional judgment of the inspector.

B2E's sampling strategy incorporated the Asbestos Hazard Emergency Response Act (AHERA) requirements, quantities of the suspect material, and the inspector's judgment to aid in the identification of the suspect asbestos-containing material (ACM).

B2E's sampling strategy was to identify and collect the accessible suspect ACM in accordance with the AHERA (40 CFR, Part 763, Subpart E) sampling protocols. Actual collection of a bulk asbestos sample involves physically removing approximately one square inch (1 in^2) or more of the material and placing it in an airtight sample container marked with a unique identification number.

The current asbestos investigation and bulk sampling performed was limited to those buildings and areas which may be impacted by the current scheduled Exterior Modernization project.

Micron Environmental Labs, Inc. (NVLAP #200294-0) located at 3565 Lexington Avenue, El Monte, California (626 454-4782) analyzed the asbestos bulk samples using polarized light microscopy (PLM). PLM analysis utilizes dispersion staining techniques (ref.: USEPA Method 600/R-93/116) to determine the asbestos content of the bulk samples collected at the site.

The following table is a summary of the suspect ACM that have been determined, through laboratory analysis and/or assumed, to contain asbestos:

ASBESTOS CONTAINING MATERIALS

MATERIAL	LOCATION	SAMPLE NUMBERS	SCAQMD CLASS	CAL/OSHA CLASS	FRIABLE (1)	ASBESTOS CONTENT
Exterior Texture Coat (on Concrete Walls)	Building C – Exterior Concrete Walls	N/A	I	I	NF/F	PACM
Exterior Texture Coat (on Concrete Walls)	Building D – Exterior Concrete Walls	N/A	I	I	NF/F	PACM

SF = Square Feet, NA = Not Applicable, LF = Linear Feet

(1) Friable-The classification is based upon the existing material condition and/or the potential condition of the material to change when disturbed in accordance with applicable regulatory definitions.

F=Friable NF=Non-Friable NF/F=Currently Non-Friable but becomes Friable when disturbed

PACM – Presumed Asbestos-Containing Material – Presumed ACM until sample results prove otherwise.

Actual Impact Quantities are unknown and need to be verified by the scope of work in the bid drawings.

In accordance with the South Coast Air Quality Management District (SCAQMD) Rule 1403, any material that contains greater than one percent (1.0%) asbestos is considered an asbestos-containing material (ACM) and is categorized as either friable ACM or non-friable ACM. There are two categories of non-friable materials: Class I non-friable ACM and Class II non-friable ACM.

- Class I non-friable ACM is any asbestos-containing material that, when dry, can be broken, crumbled, pulverized, or reduced to powder in the course of demolition or renovation activities. Actions which may cause material to be broken, crumbled, pulverized, or reduced to powder include physical wear and disturbance by mechanical force, such as, but not limited to, sanding, sandblasting, cutting or abrading, improper handling or removal or leaching of matrix binders. Class I nonfriable asbestos-containing material includes, but is not limited to, fractured or crushed asbestos cement products, transite materials, mastic, roofing felts, roofing tiles, cement water pipes and resilient floor covering.
- Class II non-friable ACM is all other material containing more than one percent (1%) asbestos that is neither friable nor Class I non-friable.

Cal/OSHA assigns classes of work to materials, and activities in order to differentiate between the required work practices and engineering controls, including operations and maintenance, and custodial activities performed on or around ACM.

- Class I: activities involving the removal of TSI and surfacing ACM.
- Class II: activities involving the removal of ACM which is not TSI or surfacing material.
- Class III: repair and maintenance operations, in which ACM (including TSI, surfacing, and miscellaneous materials) is likely to be disturbed.
- Class IV: maintenance and custodial activities during which employees contact, but do not disturb ACM and activities to clean up dust, waste, and debris resulting from Class I, II, and III activities.

Any material that contains greater than one tenth of one percent (0.1%) but less than or equal to one percent (1.0%) asbestos (>0.1% x ≤ 1.0%) is considered by CAL/OSHA as an asbestos containing construction material (ACCM). ACCM is to be handled by California DOSH asbestos registered contractors, employing asbestos certified workers, and supervisors, using the minimum engineering controls as required by OSHA/Cal-OSHA.

The following table is a summary of the suspect ACM that have been determined, through laboratory analysis, to not contain asbestos:

Conclusions/Recommendations - Asbestos

As a result of the current survey no asbestos-containing materials, or asbestos-containing construction materials (ACCM) were identified at the buildings/areas surveyed, within the defined scope of work, however the exterior texture coating (on concrete walls) at Buildings C and D is presumed to contain asbestos until sample results are received.

B2E recommends sampling of any suspect asbestos-containing material that may potentially be disturbed by the Exterior Modernization project that has not been identified in this report or was not part of our scope of work.

B2E recommends that all asbestos-containing materials identified in this report that will be impacted or have the potential for being impacted by the Exterior Modernization project activities be properly abated in accordance with all federal, state, and local asbestos regulations, prior to the renovation/demolition activities.

Survey Summary - Lead

Lead paint sampling was conducted to assist with compliance with the CAL/OSHA regulations for lead (CCR Title 8 Section 1532.1), by verifying the presence or absence of elemental lead materials which may be present, involved in, or impacted by any scheduled renovation/demolition activities. The lead paint sampling was conducted for Cal-OSHA compliance purposes in order to provide information on the presence and content of elemental lead-containing paint which could lead to potential personal exposure during renovation/demolition activities. In addition, the lead paint sampling was also conducted to assist in eliminating the potential creation of lead hazards associated with any renovation/demolition activities.

The suspect lead samples were collected on May 16, 2024, by B2E inspectors Armando Garcia, a California Department of Public Health Lead Sampling Technician (LRC-00007469) and Yaritzie Moreno, a California Department of Public Health Lead Sampling Technician (LRC-00011842).

The suspect lead samples were collected using wet methods and a cutting/scraping method. The sample tool was wet wiped after each sampling process. The suspect lead paint samples were placed into pre-labeled sample bags and sealed. The samples were then sent to an independent third-party laboratory, Micron Environmental Labs, Inc. located at 3565 Lexington Avenue, El Monte, California, for analysis utilizing EPA Method SW 846 3050B/7420 for lead.

Conclusions/Recommendations - Lead

B2E recommends sampling of any suspect lead paint material that may be disturbed by the Exterior Modernization project activities that has not been identified in this report or was not part of our scope of work.

B2E recommends that surfaces/components with detectable lead levels identified in this report that have the potential for being impacted by the Exterior Modernization project activities, and which may cause occupational exposures to lead, and/or create a potential lead hazard, be properly removed (e.g., paint removal, component removal) and/or stabilized in accordance with federal, state and local lead regulations. Additionally, B2E recommends that all loose & flaky paint be properly stabilized prior to the Exterior Modernization project activities.

Lead waste generated by renovation or demolition activities must be profiled and disposed of properly as required by the California Department of Toxics Substance Control, CCR Title 22, Division 4.5 (CA DTSC). Chemical Profile Tests, Total Threshold Limit Concentration (TTLC), Soluble Threshold Limit Concentration (STLC) and/or Toxic Characteristic Leaching Procedure (TCLP) are to be performed on the waste containing lead generated by lead-related construction activities or assumed to be a federal hazardous waste.

The results, findings, conclusions, and recommendations expressed in this report are based solely on conditions noted during B2E's inspection of the site. As the user of this report, the Client and respective contractors are advised of the following limitations on the information presented in this report.

1. This report is intended for the sole use of the Client. The scope of services performed in execution of this evaluation may not be appropriate to satisfy the needs of other users and use or re-use of this document or the findings, conclusions, or recommendations is at the risk of said user.
2. B2E did not perform destructive sampling -- it was not within B2E's scope of work to remove surface materials to investigate portions of the structure or materials that may lay beneath the surface -- thus, any materials that could not be visually identified on the surface were not inspected and would not be noted in this report.

3. The asbestos and lead sampling was performed in a manner consistent with the level of care and skill ordinarily exercised by environmental professionals practicing contemporaneously under similar conditions in the area of the project in question. No other warranty, express or implied, is given and all other warranties are hereby expressly disclaimed. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.
4. This report is not a comprehensive site evaluation and should not be construed as such. Only the materials to be impacted by the current scheduled Exterior Modernization project in the buildings/areas surveyed are included in this report.

Thank you for this opportunity to be of service to the Colton Joint Unified School District. If you have any questions, please feel free to contact us at (626) 507-7161.

Dear B2 Environmental,

This report is a summary of the analytical results for 29 bulk sample(s) received by the laboratory on 5/20/2024.

The analyses were conducted using polarized light microscopy (PLM) in accordance with EPA Test Method 600/M4-82-020 as of The Determination of Asbestos in Bulk Insulation Samples as presented in 40 CFR Appendix E to Subpart E of Part 763 (7-01-07 Edition) and EPA Interim Test Method 600/R-93/116 (July 1993). Quantification of percent content is by Calibrated Visual Estimation (CVES) expressed in units of percent area. Samples that contain distinct separable layers are analyzed by layer unless a composite has been requested. The laboratory analyzes samples submitted according to the customer submitted sample log and will analyze additional layers (when observed) upon request. CVES are calibrated using standard reference materials as part of the laboratory's internal and external quality control and proficiency programs. Micron Environmental recommends the use of Transmission Electron Microscopy (TEM) for samples comprised of non-friable organic binder when asbestos is not detected by PLM, as fibers may exist in these matrices but below the resolution capability of the polarized light microscope.

Micron Environmental labs, Inc. is accredited by the NIST National Voluntary Laboratory Accreditation Program (NVLAP), laboratory code 200294-0 and California's Environmental Laboratory Accreditation Program (Waterboards), laboratory code 2297, International Accreditation Service (IAS) 2016 TNI-2 for this analysis. D. Remove or mask surface appurtenances, including electrical plates, hardware, light fixture trim, escutcheons, and fittings, prior to preparing surfaces for finishing.

E. Seal surfaces that might cause bleed through or staining of topcoat.

F. Remove mildew from impervious surfaces by scrubbing with solution of tetra-sodium phosphate and bleach. Rinse with clean water and allow surface to dry.

G. Masonry:

1. Remove efflorescence and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces or if alkalinity of mortar joints exceed that permitted in manufacturer's written instructions. Allow to dry.

2. Prepare surface as recommended by top coat manufacturer.

3. Clean surfaces with pressurized water. Use pressure range of 600 to 1,500 psi at 6 to 12 inches. Allow to dry.

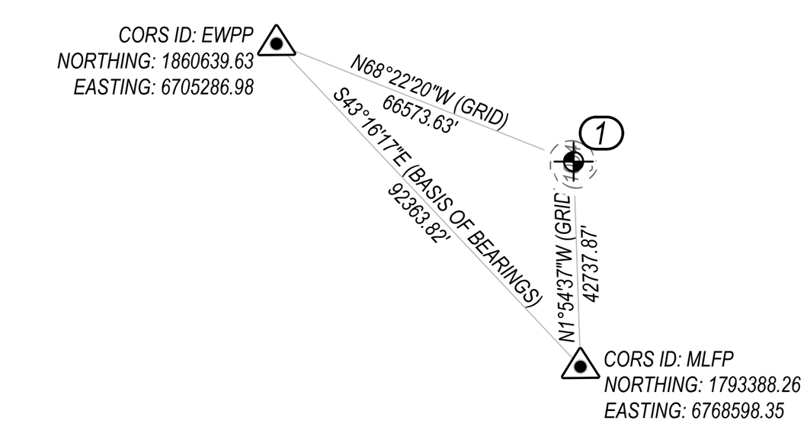
THE POINT 1 CONTROL AND CONTINUOUS OPERATING REFERENCE STATION TIES ARE SHOWN ON THE DIAGRAM BELOW AND ARE REFERENCED ON BASIS OF BEARINGS STATEMENT.



GENERAL NOTES:

THE FIELD TOPOGRAPHY SHOWN HERON WAS COMPILED BY FIELD SURVEY PERFORMED ON 08/23/2022 & 09/06/2022 BY EPIC ENGINEERS.

IN PREPARING THESE PLANS, EPIC ENGINEERS, INC. DID A THOROUGH SEARCH FOR ALL EXISTING PLANS AND COMPILED A FIELD SURVEY OF ALL ABOVE GROUND APPURTENANCES. EPIC ENGINEERS, INC. PROVIDES NO WARRANTY AND ACCEPTS NO RESPONSIBILITY AS TO THE ACTUAL LOCATION OF ANY UNDERGROUND OR ABOVE GROUND UTILITY EITHER INSTALLED BEFORE OR AFTER THE DATE OF PREPARATION OF THESE PLANS. CONTRACTOR TO CONTACT UNDERGROUND SERVICE ALERT @ 811 TO VERIFY LOCATION OF EXISTING UTILITY LOCATIONS AND SHALL CONTACT THE ENGINEER OF RECORD IF THERE IS ANY MATERIAL DISCREPANCY.

BENCHMARK:

VERTICAL CONTROL FOR THIS SURVEY IS NAVD88 GEOID18 AS ESTABLISHED BY STATIC GPS BASED ON THE CORS STATIONS LISTED UNDER THE BASIS OF BEARINGS SHOWN HEREON.

A TEMPORARY BENCHMARK WAS ESTABLISHED AT THE BASE CONTROL POINT NO. 1 REFERENCED ABOVE

DESCRIPTION: MN

ELEVATION: 1009.01' (NAVD88)

BASIS OF BEARINGS:

THE BASIS OF BEARINGS FOR THIS SURVEY IS THE CALIFORNIA STATE PLANE COORDINATE SYSTEM:

   ACCESSIBLE PATH OF TRAVEL AS INDICATED ON PLANS IS A BARRIER FREE ACCESS ROUTE WITHOUT AN ABRUPT LEVEL CHANGES EXCEEDING 1/2" IF BEVELED AT 1:2 MAXIMUM SLOPE OR VERTICAL LEVEL CHANGES NOT EXCEEDING 1/4" MAXIMUM AND AT LEAST 48" IN WIDTH. SURFACE IS STABLE, FIRM, AND SLIP RESISTANT. CROSS SLOE DOES NOT EXCEED 2% AND SLOPE IN THE DIRECTION OF TRAVEL IS LESS THAN 5% UNLESS OTHERWISE INDICATED. ACCESSIBLE PATH OF TRAVEL SHALL BE MAINTAINED FREE OF OVERHANGING OBSTRUCTIONS TO 80" MINIMUM AND PROTRUDING OBJECTS GREATER THAN 4" PROJECTION FROM WALL ABOVE 27" AND LESS THAN 80". ARCHITECT SHALL VERIFY THAT THERE ARE NO BARRIERS IN THE PATH OF TRAVEL.
2. DESIGN PROFESSIONAL IN GENERAL RESPONSIBLE CHARGE STATEMENT: THE POT IDENTIFIED IN THESE CONSTRUCTION DOCUMENTS IS COMPLAINT WITH THE CURRENT CALIFORNIA BUILDING CODE ACCESSIBILITY PROVISIONS FOR PATH OF TRAVEL REQUIREMENTS FOR ALTERATIONS AND STRUCTURAL REPAIRS. AS PART OF THE DESIGN OF THIS PROJECT, THE POT WAS EXAMINED AND ANY ELEMENTS, COMPONENTS OR PORTIONS OF THE POT THAT WERE DETERMINED TO BE NON COMPLAINT 1) HAVE BEEN IDENTIFIED AND 2) THE CORRECTIVE WORK NECESSARY TO BRING THEM INTO COMPLIANCE HAS BEEN INCLUDED WITHIN THE COPE OF THIS PROJECT'S WORK THROUGH DETAILS, DRAWINGS, AND SPECIFICATIONS INCORPORATED INTO THESE CONSTRUCTION DOCUMENTS. ANY NONCOMPLIANT, COMPONENTS OR PORTIONS OF THE POT THAT WILL NOT BE CORRECT BY THIS PROJECT BASED ON VALUATION THRESHOLD LIMITATIONS OR A FINDING OF UNREASONABLE HARDSHIP ARE SO INDICATED IN THESE CONSTRUCTION DOCUMENTS.
3. DURING CONSTRUCTION, IF POT ITEMS WITHIN THE SCOPE OF THE PROJECT REPRESENTED AS CODE COMPLAINT ARE FOUND TO BE NONCONFORMING BEYOND REASONABLE CONSTRUCTION TOLERANCES, THEY SHALL BE BROUGHT INTO COMPLIANCE WITH THE CBC AS PART OF THIS PROJECT BY MEANS OF A "CONSTRUCTION CHANGE DOCUMENT"
4. GATES IN THE ACCESSIBLE PATH OF TRAVEL SHALL COMPLY WITH ALL DOOR REQUIREMENTS STATED IN CBC SECTIONS 1010 AND 11B-404 FOR DOOR WIDTH, CLEARANCE, LANDINGS, DOOR HARDWARE, EXIT DEVICE, DOOR OPERATING FORCE AND SURFACES
